

# Power your fleet with industry- leading dispatch

Smarter automation with Sherlock

Designed to make better decisions for your fleet as a whole

**Boost efficiency and performance**

# Auto-allocation designed to replicate real world decision making

- Pioneering dispatch – automated proven dispatcher decision-making to unlock growth at scale
- Built to handle high volumes of bookings simultaneously without compromising on decision-making quality
- Optimises both best driver for a booking and overall fleet efficiency in real time
- Manages complex customer requests and prioritisation whilst ensuring consistent service levels across the fleet

# Intelligent dispatch decisions based on real data and live traffic conditions

## Prioritise what matters to your business

- Configure dispatch to prioritise what matters to your business — from driver distance to pick up, customer priority, driver empty time or a combination of all
- Flexibility to align allocation with your business model, whether that's corporate accounts or B2C rides
- Ensure you're equipped to service passengers through capacity management that balances booking acceptance against actual fleet capacity
- Multiple allocation workflows — if best driver can't find a suitable driver, offers and bids keep trips moving and maximise automation
- Issues and alerts screen automatically monitors full trip lifecycle to maintain consistent service levels across the fleet by proactively identifying, resolving or escalating trips with issues

# Maximise efficiency

01

## Reduce dead mileage

Smarter routing cuts empty miles across your fleet.

02

## Increase customer satisfaction

Faster, more reliable pickups and consistent service.

03

## Boost driver earnings

Optimised allocation making drivers more efficient and productive.

04

## Maximise efficiency

Every decision optimised for the fleet as a whole.

**Deliver better  
outcomes for your  
business with  
industry-leading  
dispatch.**

Sherlock — Smarter dispatch automation
